Cross-strain GO composition of MS-detected proteins (depth ≥ 2)
Biological Process
Cellular Component
Molecular Function
Symbiodinium microadriaticum
Symbiodinium natans
Breviolum minutum
protein ubiquitination
metabolic process
ubiquitin-dependent protein catabolic process
primary metabolic process
glycolytic process
protein phosphorylation
anatomical structure development
macromolecule metabolic process
regulation of biological process
glucose metabolic process
carbohydrate metabolic process
regulation of cellular process
regulation of molecular function
intracellular anatomical structure
cytoplasm
membrane
plasma membrane
cytosol
organelle
intracellular organelle
protein binding
ATP binding
ubiquitin-protein transferase activity
ubiquitin protein ligase activity
oxidoreductase activity
calcium ion binding
heterocyclic compound binding
small molecule binding
nucleotide binding
nucleoside phosphate binding
hydrolase activity
enzyme binding
signaling receptor activity
% detected signal
(within strain)
35%
20%
5%
