Cross-strain GO composition of MS-detected proteins (depth ≥ 3)
Biological Process
Cellular Component
Molecular Function
Symbiodinium microadriaticum
Symbiodinium natans
Breviolum minutum
protein ubiquitination
ubiquitin-dependent protein catabolic process
primary metabolic process
glycolytic process
protein phosphorylation
multicellular organism development
macromolecule metabolic process
cellular component organization
glucose metabolic process
carbohydrate metabolic process
regulation of cellular process
positive regulation of biological process
positive regulation of cellular process
regulation of localization
plasma membrane
intracellular organelle
nucleus
membrane-bounded organelle
intracellular membrane-bounded organelle
membraneless organelle
intracellular membraneless organelle
cytoskeleton
ATP binding
ubiquitin-protein transferase activity
ubiquitin protein ligase activity
calcium ion binding
heterocyclic compound binding
protein kinase activity
nucleotide binding
Aldehyde/oxo NAD(P)+ oxidoreductase
NAD binding
cellulose binding
enzyme binding
kinase binding
protein kinase binding
chlorophyll binding
% detected signal
(within strain)
35%
20%
5%
