Cross-strain GO composition of MS-detected proteins
Biological Process
Cellular Component
Molecular Function
Symbiodinium microadriaticum
Symbiodinium natans
Breviolum minutum
protein catabolic process
carbohydrate metabolic process
carbohydrate derivative metabolic process
generation of precursor metabolites and energy
nucleobase-containing small molecule metabolic process
anatomical structure development
cell differentiation
regulation of DNA-templated transcription
signaling
cell adhesion
cilium organization
plasma membrane
cytosol
organelle
nucleus
cytoskeleton
mitochondrion
extracellular region
cell wall
cilium
microtubule organizing center
catalytic activity, acting on a protein
transferase activity
catalytic activity
oxidoreductase activity
hydrolase activity
structural molecule activity
isomerase activity
transporter activity
molecular transducer activity
% detected signal
(within strain)
35%
20%
5%
